

User prompt: "deploy dist/ to prod"

UserPromptSubmit Hook → nautilus-compass/recall.py

Recall

Top-K memory by
time + cosine

Drift

weighted top-3 mean
vs 60 anchors

Strategy

DPT-style path
trigger by keyword

Inject into LLM context (system prompt):

- 24h memory (trust) + 7d+ memory (warning)
- drift score = -0.05 + alert: 'see systemctl active = deploy ok' (cos=0.59)
- strategy: 'verify deploy by curl, not just systemctl'

Claude generates response with context awareness
